Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Cruikshank, D.R. 1984. Temperature profiles for 29 lakes in the Experimental Lakes Area, northwestern Ontario, 1968-1983. Can. Data Rep. Fish. Aquat. Sci. 452: iv + 519 p. (Bound in two parts)

Over 2 100 temperature profiles of 29 lakes in the Experimental Lakes Area in northwestern Ontario are presented. This report also includes data on secchi depths, water colour, planar thermoclines, weather descriptions and inflow/outflow temperatures.

Key words: temperature profiles; secchi depths; thermocline.

RESUME

Cruikshank, D.R. 1984. Temperature profiles for 29 lakes in the Experimental Lakes Area, northwestern Ontario, 1968-1983. Can. Data Rep. Fish. Aquat. Sci. 452: iv + 519 p. (Bound in two parts)

Le présent rapport comprend plus de 2 100 profils de température tirés de 29 lacs dans la Région des Lacs Expérimentaux du Nord-Ouest ontarien. On y trouve également des données sur les profondeurs Secchi, la couleur de l'eau, les thermoclines planaires, la météo et la température de l'eau à l'entrée et à la sortie des lacs.

Mots-clés: profils de température; profondeurs Secchi; thermocline.

INTRODUCTION

Temperature profiles of the Experimental Lakes Area (ELA) lakes have been measured on a regular basis since 1968. Temperature profiles are usually measured during the morning collection of lake water chemistry profiles or zooplankton samples. In this report, the water temperature profiles of 29 lakes along with any data for secchi depths, water colour, planar thermocline, epilimnion depth, weather descriptions, and inflow/outflow temperatures are presented. Almost half of the lakes have 8-16 years of data and three have complete data sets from 1969 to 1983.

Most lakes stratify by mid-May with stable summer thermal regimes appearing by July (Cruikshank 1984). The stratification begins to break down by mid-September. Most ELA lakes don't completely turnover in spring. Others (223, 224, 228, 239, 261, 302) have only full turnovers while some (120, 227, 230, 383) never or seldom turnover. Smaller lakes may have some ice cover by late October with most freezing in mid-November and melting in late April to early May. Winter temperature profiles for several lakes are presented.

The winter profiles were textbook examples with surface temperatures under the ice depressed and the remaining water column was isothermal at approximately 4°C. Winter profiles were not taken from 1975 to 1983.

In this report just over 2 100 temperature profiles are presented.

METHODS

Temperature profiles of ELA lakes from 1968 to 1983 were taken using Montedoro-Whitney Models TC-5A or TC-5C thermistors. In 1983 most profiles were taken using a Flett Research Mark II Digital Telethermometer. All readings have been corrected using a calibration curve that was calculated by using a mercury thermometer (0.05°C accuracy). Profiles were obtained by starting at the surface and taking temperature readings at one metre intervals. If the temperature difference between successive metre depths exceeded 1°C, measurements were taken every quarter metre until the difference between metre depths was less than 1°C.

Inflow, outflow and air temperatures were taken with a pocket thermometer. Weather descriptions are subjective and vary between observers. Secchi depths were measured on the shadow side of the boat during the morning. The secchi disc was lowered until it disappeared. The depth at which it reappeared was recorded. The water colour was fairly subjective but was defined as the colour of water against the white background of the secchi disc at 1/2 the recorded secchi depth. Epilimnion depth was calculated as the point in the water column where temperature began to decrease at a rate greater than 1°C per metre. Planar thermocline was calculated as the point where the change in temperature per metre depth was greatest.

All calculations and printouts were done by a Hewlett Packard Model 87XM computer.

ACKNOWLEDGMENTS

I would like to thank D.W. Schindler, Russ Schmidt, Ron Reid, Eric Matheson and John Penny, all of whom supervised the collection of field data for part of the 16 year period. I would also like to thank Ralph Scerbo, Susan Kasian and Everett Fee for their help in computer programming and Lillian Wilson who typed this report.

APPENDIX 1

All temperatures in degrees Celsius ($^{\circ}\text{C}$)

All depths in metres (m)

Air temperatures are accurate to 1°C and water temperatures to 0.05°C .

In printouts where day of month = 0 it is actually the last day of the previous month ie. 0 Sept, 74 is 31 Aug, 74.

Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Le titre exact paraît au haut du résumé de chaque rapport.
